INCIDENT RESPONSE REPORT

1. Executive Summary

On August 18, 2025, at approximately 14:00 UTC, a user reported a suspicious email claiming to be from IT Support. Analysis confirmed it was a credential harvesting phishing attempt. The email contained a malicious link to a fake login page. The user did not enter credentials. The email was quarantined, the link blocked, and affected user passwords were reset as a precaution.

2. Timeline (All times UTC)

Timestamp (UTC)	Action Taken
2025-08-18 14:00:00	Phishing email reported by user
2025-08-18 14:15:00	SOC Analyst reviewed email headers
2025-08-18 14:20:00	URL submitted to VirusTotal (malicious confirmed)
2025-08-18 14:25:00	Email trace initiated in Exchange admin center
2025-08-18 14:30:00	Email purged from all user mailboxes
2025-08-18 14:35:00	Sender domain added to blocklist
2025-08-18 14:40:00	Affected user password reset enforced
2025-08-18 14:45:00	EDR scan initiated on user endpoint
2025-08-18 15:00:00	Incident report drafted

3. Impact Analysis

- 1 user potentially exposed (john.doe@company.com)
- No credential compromise confirmed (user did not click link)
- No malware installation detected
- No data exfiltration observed

4. Remediation Steps

- Quarantined phishing email from all mailboxes
- Blocked sender domain and malicious URL at firewall/proxy
- Reset affected user's password and enabled MFA
- Updated EDR blocklist with file hashes and IPs
- Notified security awareness team for follow-up training

5. Lessons Learned

- Email filtering rule updated to catch similar sender patterns
- Phishing simulation scheduled for all staff next week
- SOC playbook updated for faster URL reputation checks
