TASK 3: POST-INCIDENT ANALYSIS
Analyst: analyst1@th.local
Organization: SOC
Date: April 28, 2026
Incident: Case #1 – Phishing Alert

1. OBJECTIVE

Post-incident analysis of the phishing incident using:

- 5 Whys Root Cause Analysis
- Fishbone (Ishikawa) Diagram
- SOC Metrics (MTTD, MTTR)

2. 5 WHYS ANALYSIS

#	Question	Answer
1	Why did the phishing email reach the user?	Email filter did not catch the malicious message
2	Why did the email filter miss it?	Sender domain was newly registered
3	Why was a new domain allowed?	Default policy allows all domains
4	Why is the policy so permissive?	Security team not involved in setup
5	Why wasn't security involved?	No formal review process exists

ROOT CAUSE: No mandatory security review for email gateway configuration changes.

3. FISHBONE DIAGRAM

Category	Factors
People	User clicked link, no awareness training
Process	No security review for IT changes
Technology	Permissive email filter, no URL filtering
Policy	No DMARC, no reporting process

4. METRICS

Metric	*Value*
MTTD	2 minutes
MTTR	12 minutes
Total Time	14 minutes

5. RECOMMENDATIONS

1. Default-deny email policy
2. Security sign-off for IT changes

3. Enable DMARC enforcement
4. Quarterly phishing training
5. Create phishing reporting process
